Tools Required:

- 8mm Allen Hex Key

What's included:

Parts

- Passenger Panel

Hardware

- M12x50mm Button Head Bolt 6

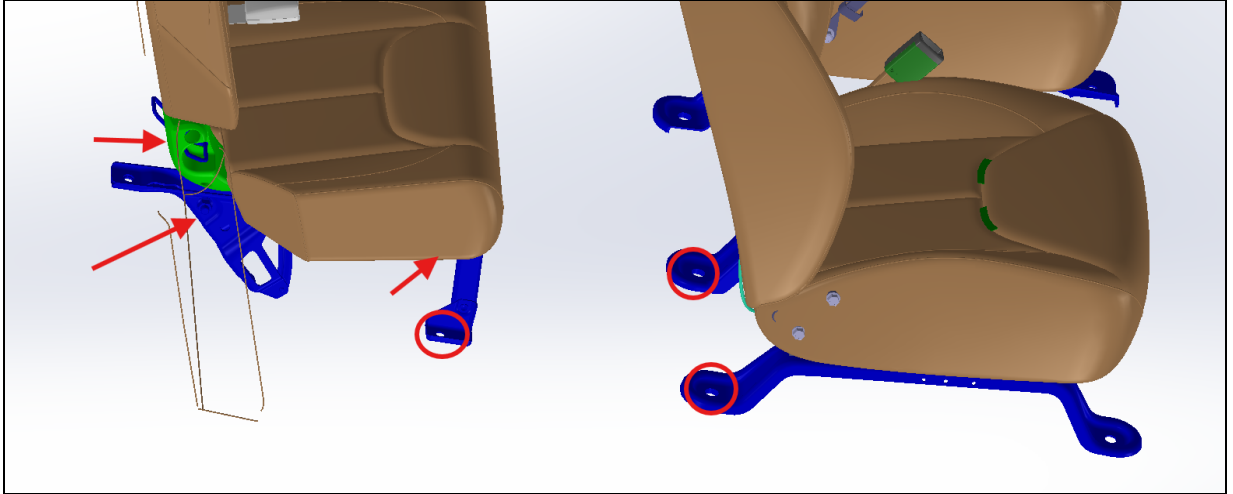

- Aluminum Spacer 32

Step 1 - Remove Seats and Factory Bolts

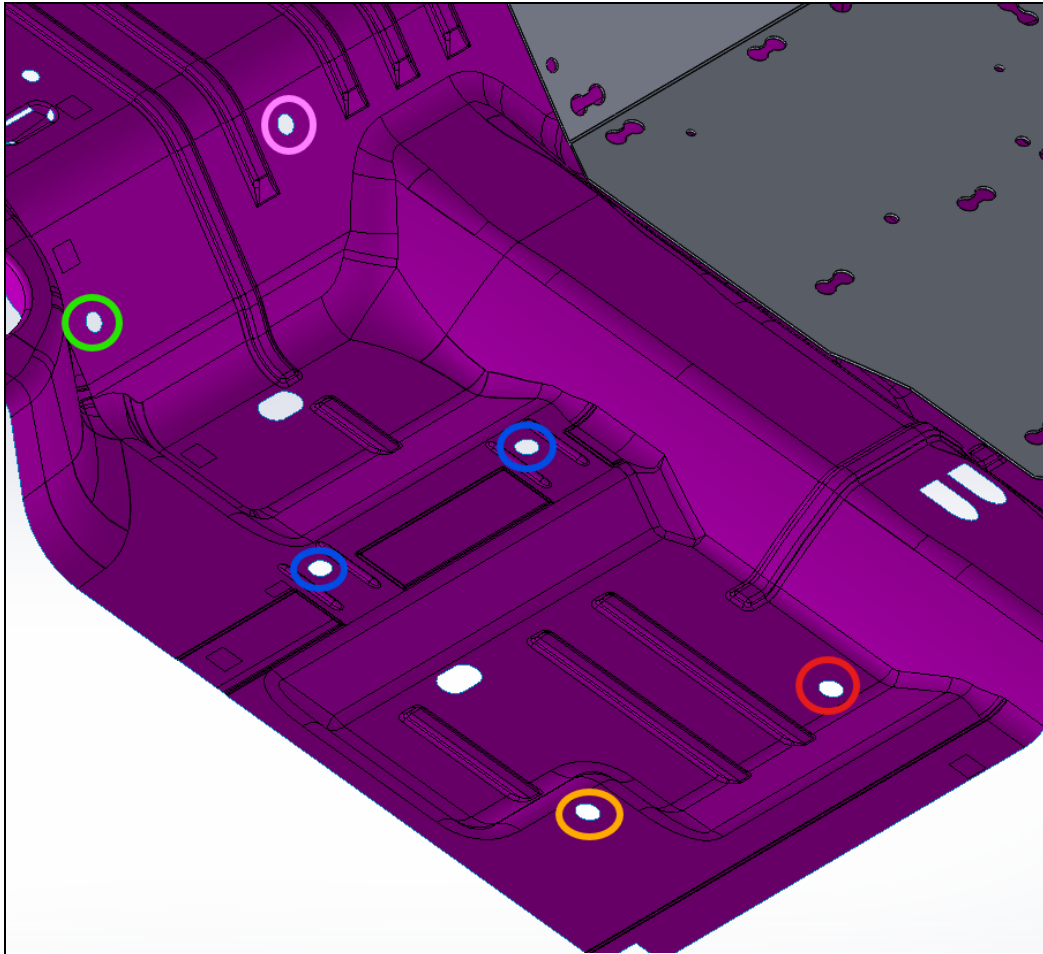

The first step in installing both the driver and passenger side seat delete is to remove the seats and the six factory bolts. Two of these bolts are located in the rear of the front seat while the other four are located in the front and rear of the seats you just removed. Once these bolts are removed, you are ready to begin assembly. Do this for each panel you purchase.

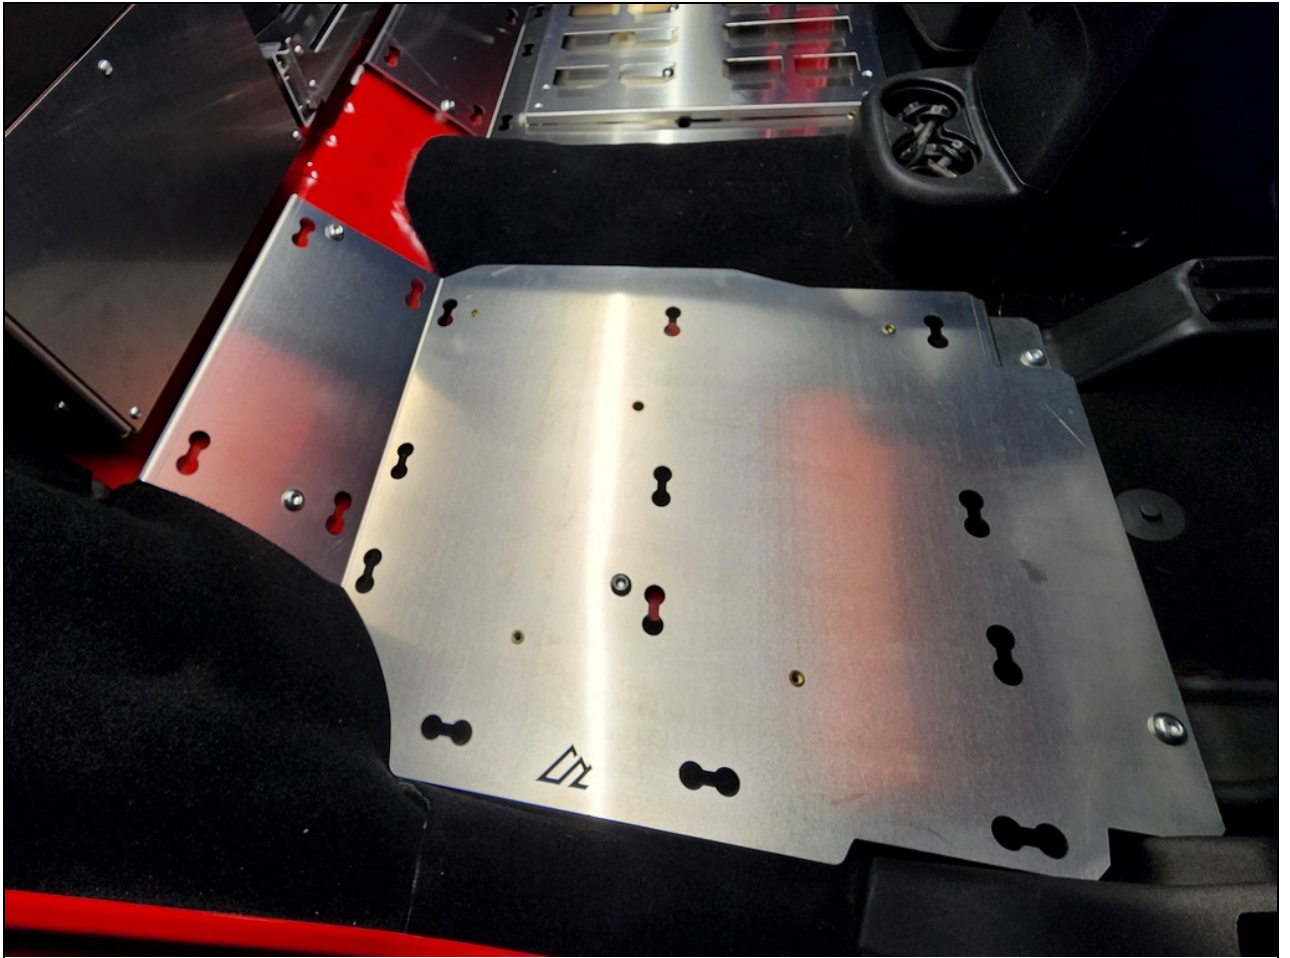

Step 2 - Prepare Spacers and Install the Platform

We strongly recommend taping the spacers together to make installation easier. For each side you will need the following: (2) 7 spacer stacks, (1) 6 spacer stack, (1) 5 spacer stack, (1) 4 spacer stack, and (1) 3 spacer stack. Once you have these stacks ready you can begin installation. Place each of the stacks in the following locations:

Note: If you notice that the spacing is too short or tall on certain spots, don't be afraid to remove or attach more. We overprovide this hardware in case this happens.

We recommend starting with the fromstmost holes and working back. Once done, you seat delete should like as follows
